SHARP®

Sharp Programmable Controller

Model name

Hand-held programmer   *JW-15PG*

User's Manual

Thank you for purchasing the JW-15PG hand-held programmer for the Sharp programmable controller satellite W series.

This book (the user's manual) describes the operation of the JW-15PG.

Depending on the PLC model you are using, you may want to read this book together with the "Handling Manual for JW-14PG." Refer to the table below.

PLC model names	Reference manual		
	Table of functions Table of operation procedure	Operations peculiar to JW300	Operation details
JW300	This manual (Chapter 7, 8)	This manual (Chapter 9)	JW-14PG instruction manual *
JW50H/70H/100H, JW50/70/100 JW30H, JW20H, JW20, JW10 J-board (Z500), J-board (Z300) W100H, W70H, W100 W51, W16, W10 JW-32CV1/2/3		____	

  * If you are using the JW300 series, the descriptions are the same as for the JW-14PG, except
    for items marked "Operation specific to the JW300."
    For other PLC models, all the operations are the same as for the JW-14PG.
    To find the reference pages in the JW-14PG Handling Manual, see Chapter 8 in this manual.
  - When using the JW300 or JW50H/70H/100H, set the MODE switches on the JW-15PG in order
    to match the PLC model you are using. => See page 4-2

Precautions

  - When you plan to use SHARP programmable controllers (hereafter referred to as "PLCs"), you are
    requested to design each system so that even if a fault or malfunction occurs within the PLC, it will not
    lead to a serious accident in your system. You should incorporate back-up measures and fail-safe features
    in your system that will thoroughly protect your system from malfunctions if a fault or error occurs in the
    PLC.
  - SHARP PLCs are designed and manufactured with the idea that they will be used in general applications
    in ordinary industries. Therefore, they must not be used in specific applications that can affect the health
    or safety of the public, such as nuclear power plants and other power generating plants. Such applications
    require a special warranty of quality that SHARP explicitly does NOT offer for these PLCs. However, if a
    user will certify that he/she does not requires a special quality warranty on the PLC, and will limit the use
    of the PLC to non-critical areas of these applications, SHARP will agree to such use.
    If you are planning to use SHARP PLCs for applications that may affect the lives of human beings and
    property, and you need particularly high reliability performance, such as in the fields of aviation, medicine,
    transportation, combustion and fuel processing equipment, passenger cars, amusement park rides, and
    safety equipment, please contact our sales division so that we can confirm the required specifications.

Notes

  - Though this manual is produced with the almost care, if you have any questions and inquiries, please feel
    free to contact our dealers.
  - The whole or partial photocopy of this booklet is prohibited.
  - Contents of this booklet may be revised for improvement without notice.

Safety Precautions

Read this manual and attached documents carefully before installation, operation, maintenance and checking in order to use the machine correctly. Understand all of the machine knowledge, safety information, and cautions before starting to use. In this instruction manual, safety precautions are ranked into "danger" and "caution" as follows.

⬦Danger : Wrong handling may possibly lead to death or heavy injury.

⚠Caution : Wrong handling may possibly lead to medium or light injury.

Even in the case of ⚠Caution , a serious result may be experienced depending on the circumstances. Anyway, important points are mentioned. Be sure to observe them strictly.

The picture signs of prohibit and compel are explained below.

🚫 : It means don'ts. For example, prohibition of disassembly is indicated as (🚫).

■ Installation

⚠ Caution

- Use in the environments specified in the catalog and user's manual.
  Electric shock, fire or malfunction may be caused when used in the environments of high temperature, high humidity, dusty or corrosive atmosphere, vibration or impact.
- Install according to the manual.
  Wrong installation may cause drop, trouble or malfunction.

■ Use

⬦ Danger

- Assemble the emergency stop circuit and interlock circuit outside of the programmable controller. Otherwise the machine breakdown or accident may be caused by the trouble of the programmable controller.

⚠ Caution

- Manipulation for program change, forced output, run or stop during operation should be done with particular care by confirming safety. Misoperation may lead to machine trouble or accident.
- To avoid eye strain, rest your eyes 10 to 15 minutes every when working for long periods of time. Avoid continuous use for long periods of time.

■ Maintenance

🚫 Prohibit

- Don't disassemble or modify.
  Or fire, trouble or malfunction may be caused.

Chapter 1. Overview

The JW-15PG hand-held programmer (referred to as "programmer" in this manual) is a support tool for Sharp's programmable controller. The programmer is designed for ease of use in maintenance, as well as for programming and monitoring the programmable controller.

The JW-15PG has added functions to the standard JW-14PG model, which are compatible with JW300 series PLCs.

- Display in two languages (Japanese/English), selectable.
- An EL backlight makes it easy to read in dark locations.
- Can display messages using the device function.
  Up to three steps can be displayed at once.
- Equipped with various monitor functions including freely selected multiple points, simultaneous monitoring of two stations, and data input/output.
- Equipped with a plenty of editing functions including programming, copying data memory, and batch processing of instructions.
- Includes with error message display functions.

Chapter 2. Precautions for Use

When using and storing JW-15PG, observe the following precautions.

(1) Installation and storage

    1. Avoid installing the JW-15PG in a place where it will be exposed to:
      - Area exposed to direct sunlight.
      - Flammable gases permeate.
    2. During storage, do not place anything on the JW-15PG.

(2) Connection

When connecting the JW-15PG to a control module of a programmable controller (hereafter referred to as "PLC") with a connection cable (option), keep the cable away from high voltage lines, motor lines, signal lines to the I/O module and power supply lines.

(3) Operation

    1. Do not apply excessive force to the mounting screws or connectors.
    2. Do not press the keypad with a sharp pointed object such as a pencil or ballpoint pen.
    3. Keep the keypad away from welding sparks and hot solder.
    4. If a malfunction or error (overheating, etc.) occurs in the JW-15PG, immediately stop operation, disconnect the cable or the control module from the JW-15PG and contact your dealer or our service company.

(4) Static electricity

In an extremely dry area, large amounts of static electricity may be generated in a person. Before touching the programmer, discharge any static electricity by first touching a grounded metallic object.

(5) Cleaning

Use a soft, dry cloth to clean the programmer. Use of volatile chemicals (alcohol, thinner, freon, etc.) or a wet cloth may cause deformation or discoloration.

Corresponding models (PLC)	JW300		—	
	JW50H/70H/100H (Unusable an expansion relay)		JW50H/70H/100H (Usable an expansion relay)	
	JW30H, JW20H, JW20, JW10 J-board (Z300/500), JW50/70/100 W10/16/51/100, W70H/100H			

MODE

(Setting when delivered : 1)

Note: Make sure to disconnect the cable from JW-15PG before setting the mode switch.
Positions other than "1" to "4" cannot be used.

Chapter 5. Connection/Installation Method

This chapter describes the cable connections and installation of the JW-15PG.

5-1 Changing the direction of the connector

The orientation of the cable connector on the JW-15PG can be changed as follows.

1) Remove the 2 screws securing the connector then detach the connector and connector mounting plate from the JW-15PG.

 - Also remove the bail locks if attached.

Connector mounting plate

Connector
Bail lock

2) Change the direction of the connector mounting plate.
3) Secure the connector and connector mounting plate to the programmer with the 2 screws.

Note: Do not attach the bail locks when directly mounting the programmer to the control module. The connectors will not contact properly if they are attached.

Bail lock
5-2 Method for making cable connections

This method is used to connect the JW-15PG to a PLC using cables (JW-24KC etc.: optional). This section describes the methods for connecting the following models.

JW300	=> [1]
JW50H/70H/100H	=> [2]
JW30H, JW20H, J-board	=> [3]
JW10	=> [4]
Modules other than control modules	=> [5]
Control panel (front face)	=> [6]

[1] Connections to a control module in the JW300 series

Connect a communication port (PG COMM1 or PG/COMM2) on a control module (JW-3**CU) to the JW-15PG.

1) Connect the JW-15PG to a control module using a JW-22KC/24KC cable.

2) Secure the cable using the bail locks on the JW-15PG and screws on the communication port connector.

[2] Connecting to the JW50H/70H/100H control module

A common procedure is used to connect the programmer to the JW50H/70H/100H control module.

Connect the cable to the programmer's connector and to the control module's support tool connector. Firmly secure both the programmer's end and the control module's end of the cable with the bail locks.

Support tool connector

Programmer
(JW-15PG)

Cable
(ZW-3KC)

Control module
[Reference]
- Set the memory protect switch to "ON" when connecting or disconnecting the programmer while the JW50H/70H/100H's power is "ON." This protects the JW50H/70H/100H's memory.

Control module

Memory protect switch

ON (Input)

OFF (Output)
Notes

When the JW-15PG connected, a condition may occur where a "beep" is emitted and nothing is displayed. This occurs when the control module has been set to the device function.

[3] Connecting to the JW30H, JW20H, and J-board control modules (board)

A common procedure is used to connect the programmer to the control modules.

1) Connect the JW-15PG with the control module using the cable.

2) Secure the cable at the JW-15PG's end with the bail locks and at the control module's end with the screws.

Memory protect switch

ON

(In case of JW20H)
Notes

When the JE-15PG is connected, a condition may occur where a "beep" is emitted and nothing is displayed. This occurs when the control module has been set to the device function.

[4] Connecting to the JW10 basic module

Connect the JW-15PG and basic module using connection cable JW-12KC.
Connect the cable with the JW-15PG using the bail locks. Connect the cable with the basic module using connector retention screws.

Basic module

Connector retention screw

Programer (JW-15PG)

Connection cable (JW-12KC)
[5] Connecting to a module other than the control module

Installation methods of the JW-15PG are common for all the modules.

This section describes connection procedures to the JW-2EA I/O bus expansion adapter.

The modules other than control modules are as follows:

- I/O bus expansion adapter: JW-2EA, JW-32EA => See the precautions below.
- Network module: JW-20CM/22CM, ZW-20CM/30CM
- Remote I/O slave module: JW-20RS, ZW-20RS
- ME-MET module: JW-20MN/21MN, ZW-20CM2
- FL-net module: JW-50FL, JW-52FL,
                 JW-20FL5/T, JW-22FL5/T
- Serial interface module: JW-10SU
- Satellite net board: Z-335J
- ME-NET board: Z-334J
- FL-net board: Z-336J, Z-336J2
- Ethernet module (board): JW-50CM, JW-51CM, JW-255CM, Z-339J
- VME built-in controller : JW-32CV1/32CV2 /32CV3
JW-2EA

Precautions (Connect with JW-2EA or JW-32EA)

● In case of JW300

- Only one support tool at a time (JW-300SP, JW-15PG) can be connected to the JW-32EA.

[Example]
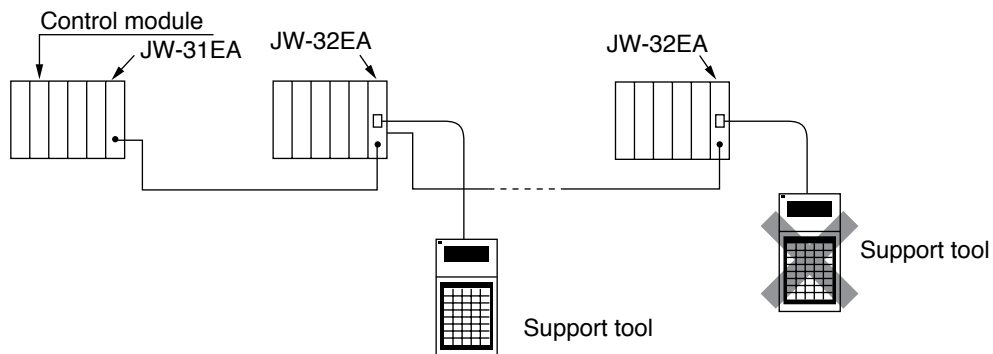

- With the JW300, when one support tool (JW-300SP, JW-15PG) is connected to the control module, you can also connect another support tool to the JW-32EA.

[Example]
To the next page

● In case of JW50H/70H/100H, JW30H

Only one support tool can be connected to the JW-2EA, JW-32EA. If a support tool is already connected to the control module or to another JW-2EA, JW-32EA, do not connect the programmer. Connecting the programmer will cause a malfunction.

[Example]

5-6
[6] Mounting to a control panel surface

The programmer can be connected by cable and mounted apart from the PLC. For example, the PLC can be mounted in a control panel and the JW-15PG can be mounted to the door on the control panel.

(Unit: mm)
Make the M3 tapping holes used to secure the JW-15PG and a hole for the connector in the door on the control panel.

↓

Mount the JW-15PG to the holes in the door on the control panel.

↓

Connect the cable to the JW-15PG's connector and to the control module's support tool connector. Firmly secure both the JW-15PG's end and the network module's end of the cable with the bail locks.
Notes

Keep the cable away from high voltage lines, power lines and the signal lines and power supply lines to the I/O module.

5-3 Direct mounting method

When JW50H/70H/100H, JW50/70/100, and W70H/100H PLC are used, you can install the JW-15PG directly on the control module. The method to connect the JW-15PG with the control module directly is shown below.

1) Detach the cover from the power supply module and fasten the programmer mounting bracket with the bracket screw.

↓
2) Attach the power supply module cover and detach the communication port cover. *

↓

3) Connect the JW-15PG's connector to the control module's support tool connector.

↓
4) Tighten the 2 programmer mounting screws.

Power supply module

Mounting bracket

Power supply module cover

Bracket screw

Programmer mounting screw

Support tool connector

Communication port

Reference
Set the memory protect switch to "ON" when mounting or dismounting the programmer while the JW50H/70H/100H, etc.'s power is "ON." This protects the JW50H/70H/100H, etc.'s memory.

Control module

Memory protect switch
ON (Input)

OFF (Output)
* Detach the communication port connector cover when directly mounting the programmer to the JW70H/100H or JW70/100. Keep the detached cover.

Notes

- When the JW-15PG is connected, a condition may occur where a "beep" is emitted and nothing is displayed. This occurs when the control module has been set to the device function.

Chapter 6. Specifications

This chapter gives the general specifications and the performance specifications for the JW-15PG.

[1] General specifications

Items		Specifications
Ambient temperature	Operation	0 to 40°C
	Storage	−20 to 60°C
Ambient humidity	Operation	35 to 85% RH (non-condensing)
	Storage	
Ambient operating atmosphere		Free from corrosive gas and dust.
Vibration resistance		Conform to JIS B 3502 (2 hours each in X, Y and Z axes)
Shock resistance		Conform to JIS B 3502
Consumption current		110 mA
Weight		Approx. 400 g
Accessories		Bail lock set 1 Programmer mounting bracket 1 Programmer mounting bracket screw (M3x6) 1

[2] Performance specification

Items	Specifications
Modules to connect with	- Control module - Ethernet module - Network module - FL-net module - ME-NET module - VME built-in controller - Remote I/O slave module - J-board - I/O bus expansion adapter - Serial interface module *
Connection method	- Cable connection (for all module for connection listed above) - Direct mounting (JW50H/70H/100H, JW50/70/100, W70H/100H)

Display device	Liquid crystal full dot matrix display (16 characters by 4 lines)
	    - With EL backlight
	       (Auto OFF: Turns OFF: after about 10 minutes from the last key
	       operation.)
	    - Contrast adjustment (key operation)
	    - Selectable between Japanese and English displays *

Keys	45 flat keys
	    - Audible alarm is emitted at an invalid operation
	    - Key click sound is ON/OFF selectable

* Use the MODE switches on the JW-15PG to set it for the model that it is connected to (and to change
  between Japanese/English). => Refer to page 4-2.

Chapter 8. Table of Operation Procedure

This chapter shows the key procedures for the functions (described in Chapter 7) on the JW-15PG.
The table can be read as follows:

Reference pages in the
JW-14PG Instruction Manual

The page numbers refer to pages with tables that describe which models can use the function.

Function name

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
Operation mode selection (P, M, C, T, I)	[✳] → [✳] → [PROG MODE] → [SET 8] (Program mode) [MNTR MODE] (Monitor mode) [CHNG MODE] (Change mode)	39	7-1

Mode sign which the operation is allowed

P : Program mode
M: Monitor mode
C : Change mode
T : Terminal mode
I : Initial mode

Operation procedure is shown here.

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
Turn buzzer ON/OFF (P, M, C, , I)	[✳] → [✳] → [B 1] → [SET 8] (ON) [RESET 9] (OFF)	34	7-1
Turn EL backlight ON/OFF (P, M, C, , I)	[✳] → [✳] → [A 0] → [SET 8] (ON) [RESET 9] (OFF)	35	
Adjust contrast (P, M, C, , I)	[✳] → [✳] → [A 0] → [STEP (+)] (Darker) [STEP (−)] (Brighter)	36	
Auto repeat function (P, M, C, ,)	Monitor program address or data memory address → [STEP (+)] (Turn ON 1 second or longer) --- Repeat address +1. [STEP (−)] (Turn OFF 1 second or longer) --- Repeat address -1.	37	
Change display mode (P, M, C, ,)	1PG mode → [✳] [✳] [INTL DISP] → 2PG mode → [✳] [✳] [INTL DISP]	38	

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
Select operation mode (P, M, C, T, I)	[✳] → [✳] → [PROG MODE] → [SET 8] (Program mode) [MNTR MODE] → (Monitor mode) [CHNG MODE] → (Change mode) [TERM MODE] → (Terminal mode) [Program mode] → [✳] → [✳] → [シフト SHIFT] → [INTL DISP] → [SET 8] (Initial mode)	39	
Operation screen menu selection (P, M, C, T, I)	[クリア CLR] 1st → [✳] 2nd → [✳] → Normal key operation 3rd [✳]: → [A 0] → Turn ON/OFF EL back light; → [B 1] → Turn ON/OFF buzzer; → [E 4] → Monitor time 4th [✳]: → [F 5] → Monitor target station number; → [6] → Connect/remove live lines of I/O module; → [シフト SHIFT] → [E 4] → Monitor error 5th [✳]: → [DATA CONST] → Monitor I/O; → [INTL DISP] → Change display mode; → [シフト SHIFT] → [INTL DISP] → Initial mode 6th [✳]: → [MNTR MODE] → Monitor mode; → [CHNG MODE] → Change mode; → [PROG MODE] → Program mode, clear memory 7th [✳]: → [TERM MODE] → Device function; → [クリア CLR] → Check parity; → [検索 SRCH] → Check program	41	7-1

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
Clear memory (P, , , ,)	Flow: [*] → [*] → [PROG MODE] → [SET 8] → [クリア CLR] → [RESET 9] → [システム SYS] → [書込 ENT] → **Clear system memory (initialization)** [アドレス ADRS] *1 → [書込 ENT] → **Clear program memory** [DATA CONST] → [書込 ENT] → **Clear data memory** [^ 0] → [書込 ENT] → **Clear file register** [シフト SHIFT] → [F 5] → **Set file register number** → [書込 ENT] → **Clear assigned file register** *2 [書込 ENT] → **Clear data memory, program memory** *3 [シフト SHIFT] → [^ 0] → [書込 ENT] → **Initialize all** **Set the program capacity after expansion** → [書込 ENT] → **Clear expansion program memory**	42	7-1
Read/write system memory — Read system memory (P, M, C, ,)	[クリア CLR] → [システム SYS] → [^ 0] to [7] → [モニタ MNTR] → [STEP (+)] (Read in address incrementing direction) → [STEP (−)] (Read in address decrementing direction) Set the system memory address.	53	
Write system memory (P, , , ,)	**System memory write** → (1 byte) / [FORCE LNGTH] (1 word) → **Set data** (HEX/ OCT/DCML bit pattern) → [書込 ENT]	55	
Write system memory check code (P, , , ,)	[クリア CLR] → [システム SYS] → [C 2] → [F 5] → [7] → [書込 ENT]	57	

*1: On the JW300, if you press [STEP (+)] or [STEP (−)] you can select the block of program memory to clear.

*2: On the JW300, you cannot perform a "clear the specified file register" operation.

*3: On the W16/51, W100, and W70H/100H, a "clear the file register (file 1)" can be performed.

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Set program address (P, M, C, ,) *1		[クリア CLR] → [アドレス ADRS] → [∧ 0] to [7] Set address	60	
Enter basic and application instruction *3	Entry method of basic instructions	*2 Instruction key → Relay number → [書込 ENT] → [STEP (+)]	61	7-1
	- TMR - CNT - MD instructions entry method	[TMR] [CNT] [MD] → TMR/CNT number → [書込 ENT] → [STEP (+)] → Set value *4 → [書込 ENT] → [STEP (+)]		
	- UTMR - UCNT - DTMR - DCNT instructions entry method (BCD/BIN)	- UP (TMR/CNT) [シフト SHIFT] → [UP DOWN] → [TMR] [CNT] → BCD / [変換 CONV] BIN → [書込 ENT] → [STEP (+)] → TMR/CNT number - DOWN (TMR/CNT) [UP DOWN] → [書込 ENT] → [STEP (+)] → Set value *4 → [書込 ENT] → [STEP (+)]	62	
	Application instructions entry method	- F-XX instruction [FUN] → Function number → F-XX (FcXX) / F-XXw (FcXXw) → [FORCE LNGTH] / F-XXd (FcXXd) → [FORCE LNGTH] → [FORCE LNGTH] - FcXX instruction [FUN] → Function number → [DATA CONST] [書込 ENT] ← Register/constant ← [STEP (+)] ← [書込 ENT] (Repeat setting for the number of instruction words) F-80 IORF	R, S, B R: Rack number S: Slot number B: Specify conversion byte position [FUN] → Function number → [書込 ENT] → [STEP (+)] Slot number ← [,] ← Rack number [,] → Specify conversion byte position → [書込 ENT]	63	

Items *1 to *4 below only apply to the JW300.

*1: Method to block move a program. => Refer to page 9-1 to 3
*2: How to enter basic instruction (STR POS etc.). => Refer to page 9-10
*3: How to enter index qualifications. => Refer to page 9-13
*4: Registers can be used to set values for the TMR, CNT, UTMR, UCNT, DTMR, and the DCNT instructions.
 To use this function, press the [DATA CONST] key to change the memory pointer and enter an address. => Refer to page 9-11
 In addition, you can also specify a register in the JW10.
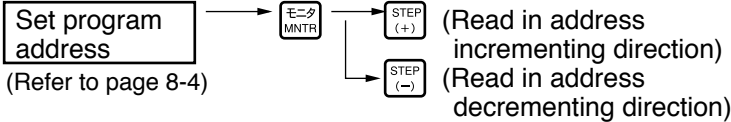

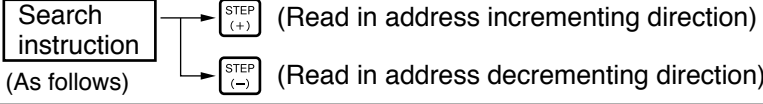

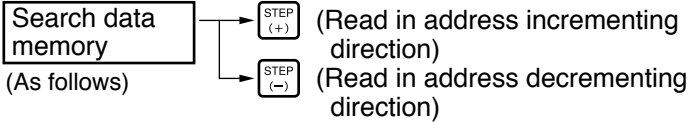

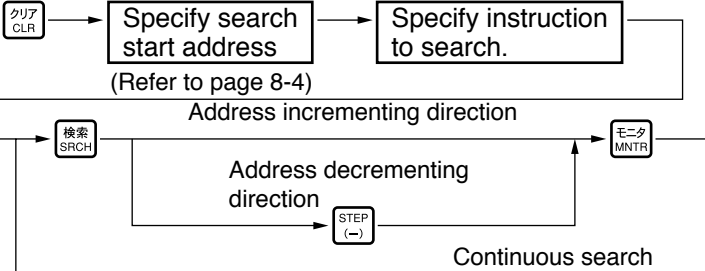

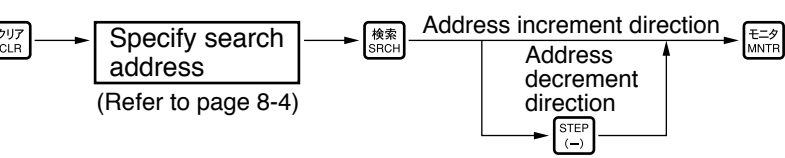

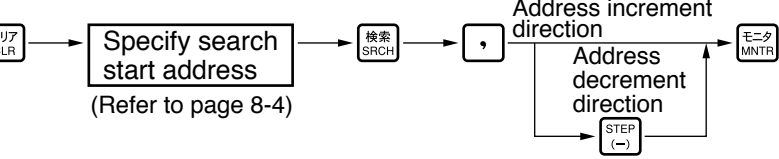

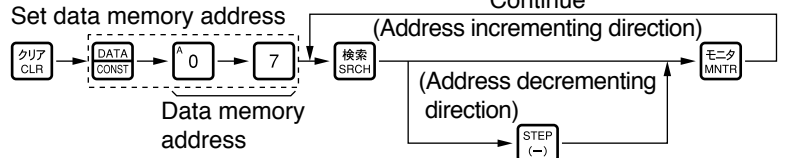

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Enter basic and application instruction	Application instruction entry method	F-202 / OPCH — P, C / ST — File N — n P : Rack port number c : Channel number ST : Communication station number N : File number n : File address FUN → Function number → 書込 ENT → STEP (+) → Port number → , → Channel number → , → Communication station number → 書込 ENT → STEP (+) → File number → 書込 ENT → STEP (+) → File address → 書込 ENT	64	7-1
	Register area selection	Press the DATA/CONST key to change the register area. [Example of JW300] ⌐00000 → b00000 → 009000 → E0000 → Z000 (Word instruction only) → f 00000000 (File register) → (loop back to ⌐00000)	65	
	Assign indirect address	Register number → 変換 CONV → @register number → 変換 CONV		
Enter application instruction	Set the register address	Display ⌐0000 → Address Display b0000 → Address Display 09000 → Enter register number (0 to 9) → , → Address Display b0000 → Address → DATA CONST		
Read/write program	Write program (P, , , ,)	- Write from address 00000 クリア CLR → Instruction word → 書込 ENT → STEP (+) - Write from a specified address Enter program address (Refer to 8-10) → モニタ MNTR → Instruction word → 書込 ENT → STEP (+) - Write from an address where no program is written クリア CLR → 検索 SRCH → モニタ MNTR → Instruction word → 書込 ENT → STEP (+) Search for NOP instruction	66	

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Read/write program	Read program (P, M, C, ,)	- Read by specifying an address Set program address → 〔モニタ MNTR〕 → 〔STEP (+)〕 (Read in address incrementing direction) 〔STEP (−)〕 (Read in address decrementing direction) (Refer to page 8-4) - Search an instruction and read Search instruction → 〔STEP (+)〕 (Read in address incrementing direction) 〔STEP (−)〕 (Read in address decrementing direction) (As follows) - Search data memory and read Search data memory → 〔STEP (+)〕 (Read in address incrementing direction) 〔STEP (−)〕 (Read in address decrementing direction) (As follows)	75	7-1
Search program	Search instruction (P, M, C, ,)	〔クリア CLR〕 → Specify search start address → Specify instruction to search. (Refer to page 8-4) → 〔検索 SRCH〕 Address incrementing direction → 〔モニタ MNTR〕 Address decrementing direction → 〔STEP (−)〕 Continuous search	76	7-2
	Search NOP instruction (P, M, C, ,)	〔クリア CLR〕 → Specify search address → 〔検索 SRCH〕 Address increment direction → 〔モニタ MNTR〕 (Refer to page 8-4) Address decrement direction → 〔STEP (−)〕	78	
	Search non-NOP instruction (P, M, C, ,)	〔クリア CLR〕 → Specify search start address → 〔検索 SRCH〕 → ，Address increment direction → 〔モニタ MNTR〕 (Refer to page 8-4) Address decrement direction → 〔STEP (−)〕	79	
	Search data memory (P, M, C, ,)	Set data memory address 〔クリア CLR〕 → 〔DATA CONST〕 → 〔A 0〕 → 〔7〕 → 〔検索 SRCH〕 Continue (Address incrementing direction) → 〔モニタ MNTR〕 Data memory address (Address decrementing direction) → 〔STEP (−)〕 Press the 〔DATA CONST〕 key to change the data memory area. * [Example of JW20H] Relay number → TMR/CNT/MD number → Byte address → Byte address (00000 to 15777) (000 to 777) (ヨ0000 to ヨ1577) (b0000 to b1777) Label number ← Register ← Register ← (LB0000 to LB1377)(E0000 to E1777)(09000 to 99777)	80	
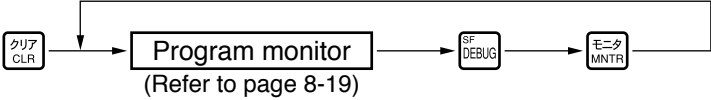

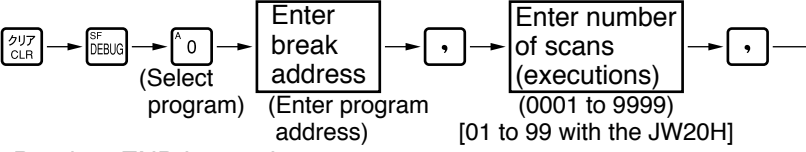

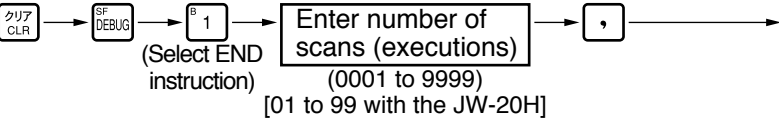

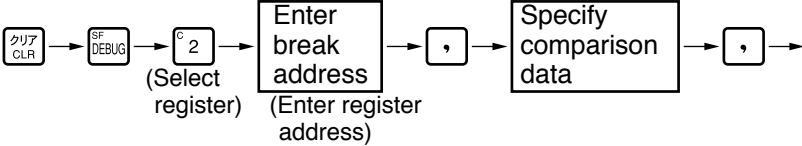

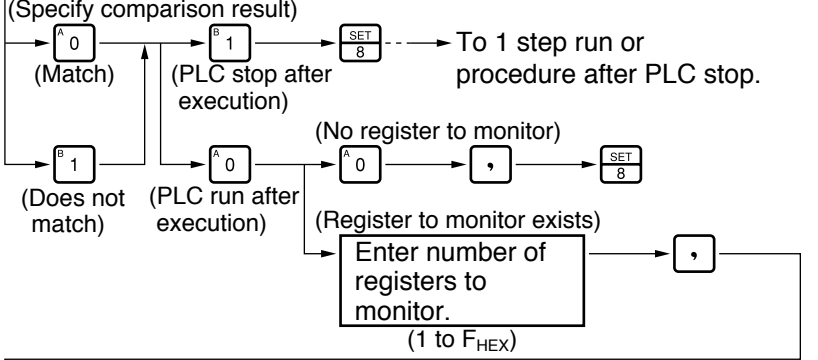

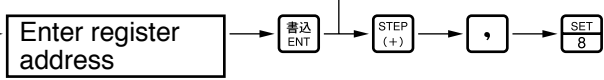

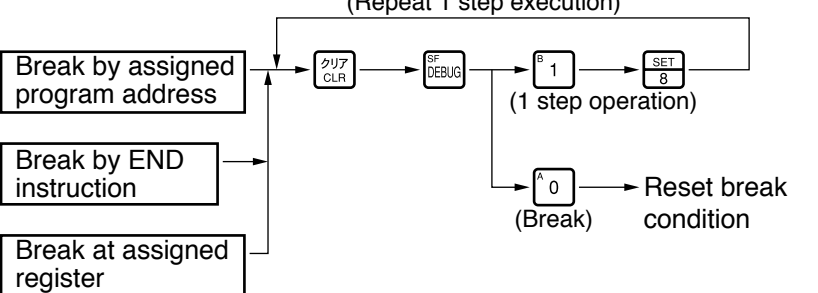

* Change the data memory in the JW300 => Refer to page 9-14.

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Search program	Re-execute search (P, M, C, ,)	Search with the modified contents (Address incrementing direction) [検索 SRCH] → [モニタ MNTR] / (Address decrementing direction) [検索 SRCH] → [STEP (−)] / (Address incrementing direction) [検索 SRCH] → [検索 SRCH] → [モニタ MNTR] / (Address decrementing direction) [検索 SRCH] → [検索 SRCH] → [STEP (−)] (Continuous operation). Search instruction (Refer to page 8-6), Search data memory (Refer to page 8-6) → Modify program	83	7-2
Modify program	Change instruction (P, , , ,)	Specify address to modify (Refer to page 8-4) → Specify instruction to modify → [書込 ENT]	84	
	Insert instruction (P, , , ,)	Specify address to insert (Refer to page 8-4) → Specify instruction to insert → [挿入 INS]	86	
	Delete instruction (P, , , ,)	Read the instruction to delete (Refer to page 8-6) → [削除 DEL]	88	
	Write during running program (, , C, ,)	[∗] → [∗] → [7] → [SET 8] → Modify program	89	
	Change TMR, CNT, and MD preset value (P, , C, ,)	Read set value currently programming (Refer to page 8-6) → Change set value → [書込 ENT]	90	
	Change application instruction constant (P, , C, ,)	Search program address (Refer to page 8-4) → Change set value → [書込 ENT]	92	
Edit program	Copy write/insert program (P, , , ,)	[クリア CLR] (Display the edit menu screen) → [編集 EDIT] (Select program process) → [C 2] (Select copy) → [A 0] → Enter top address of copy source → [,] / Enter last address of copy source → [,] / Enter top address of copy source → [,] → Continuous copy [書込 ENT] (Copy write) → [,] / [挿入 INS] (Copy insert)	94	
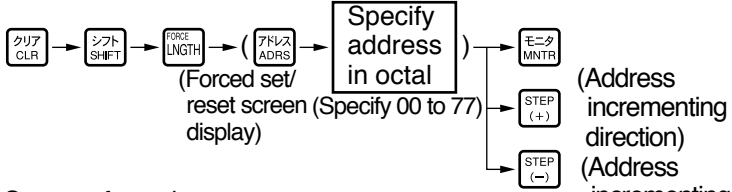

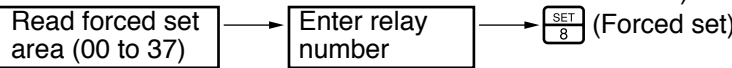

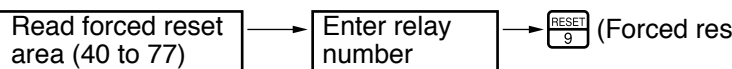

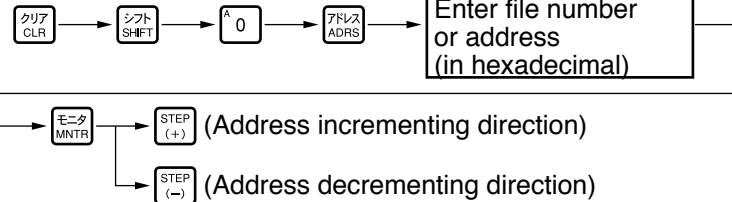

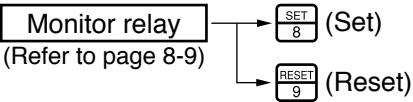

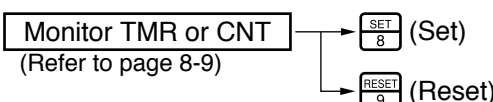

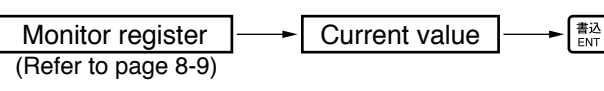

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Edit program	Write/insert program block (P, , , ,)	クリア CLR → 編集 EDIT (Display the edit menu screen) → B 1 (Select program process) → B 1 (Select block process) → A 0 (Select block delete) → Enter top address to write/insert → , → Enter last address to write/insert → , Continuous write/insert → 書込 ENT Block write → , → 挿入 INS Block insert	98	7-2
	Delete program block (P, , , ,)	クリア CLR → 編集 EDIT (Display the edit menu screen) → B 1 (Select program process) → B 1 (Select block process) → B 1 (Select block delete) → Enter top address to block delete → , Continuous delete → Enter last address to block delete → , → 削除 DEL → ,	101	
Check program	Check parity (P, , , ,)	クリア CLR → * → * → PROG MODE → SET 8 → クリア CLR → * → * → クリア CLR Continuous check Mode change to program mode (Omit if already in program mode)	103	
	Check program (P, , , ,)	クリア CLR → * → * → PROG MODE → SET 8 → クリア CLR → * → * → 検索 SRCH Continuous check	104	
	Monitor program (, M, C, ,)	- Read program Specify program address (Refer to page 8-4) → モニタ MNTR → STEP (+) (Address incrementing direction) → STEP (−) (Address decrementing direction) Search instruction (Refer to page 8-4) Search data memory (Refer to page 8-6)	108	

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Monitor data memory	Monitor relay (P, M, C, ,)	Continuous monitor [クリア CLR] → Enter data memory address → [モニタ MNTR] → [STEP (+)] (Address incrementing direction) → [STEP (−)] (Address decrementing direction)	114	7-3
	Monitor TMR, CNT, and MD (P, M, C, ,)	Press the [DATA CONST] key to change the data memory area. * [Example of JW20H]	117	
	Monitor register (P, M, C, ,)	Relay number (00000 to 15777) → TMR/CNT/MD number (000 to 777) → Byte address (コ0000 to コ1577) → Byte address (b0000 to b1777) Register (E0000 to E1777) ← Register (09000 to 09777) ← Display コ0000 → Address	120	
	Monitor multiple point (P, M, C, ,)	Display b0000 → Address Display 09000 → Enter register number (0 to 9) → , → Address Display b0000 → Address ← [DATA CONST]	124	
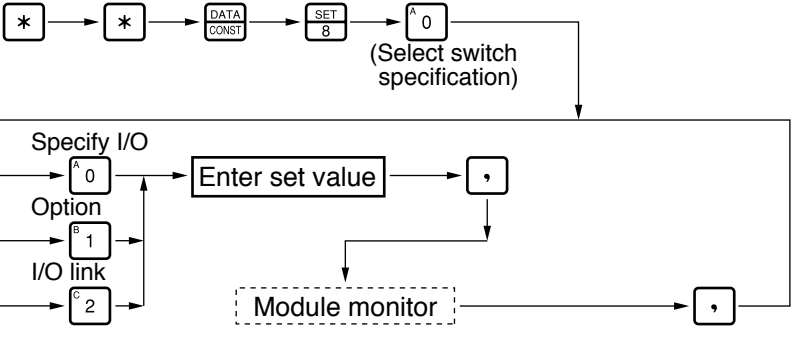

* Change the data memory in the JW300 => Refer to page 9-14.

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)

Break monitor (debug function)

Monitor break (P, , C, ,)

クリア CLR → Program monitor (Refer to page 8-19) → SF DEBUG → モニタ MNTR

→ 126

Break by specifying program address (P, , C, ,)

- Break by specifying program address

クリア CLR → SF DEBUG → A 0 (Select program) → Enter break address (Enter program address) → , → Enter number of scans (executions) (0001 to 9999) [01 to 99 with the JW20H] → ,

→ 129

Break at END instruction (P, , C, ,)

- Break at END instruction

クリア CLR → SF DEBUG → B 1 (Select END instruction) → Enter number of scans (executions) (0001 to 9999) [01 to 99 with the JW-20H] → ,

→ 136

Break at register destination (P, , C, ,)

- Break at register designation

クリア CLR → SF DEBUG → C 2 (Select register) → Enter break address (Enter register address) → , → Specify comparison data → ,

(Specify comparison result)

A 0 (Match) → B 1 (PLC stop after execution) → SET 8 ---→ To 1 step run or procedure after PLC stop.

B 1 (Does not match) → A 0 (PLC run after execution) → (No register to monitor) A 0 → , → SET 8

(Register to monitor exists) → Enter number of registers to monitor. (1 to F_HEX) → ,

(Write multiple register addresses)

→ Enter register address → 書込 ENT → STEP (+) → , → SET 8

- Procedure after PLC stops operation

クリア CLR → To each monitor operation

→ 142

→ 7-3

One step operation of the break monitor (P, , C, ,)

(Repeat 1 step execution)

Break by assigned program address
Break by END instruction
Break at assigned register

→ クリア CLR → SF DEBUG → B 1 (1 step operation) → SET 8

→ A 0 (Break) → Reset break condition

→ 149

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Forced set and reset (, , C, ,)		- Read the forced set/reset area クリア CLR → シフト SHIFT → FORCE LNGTH → (アドレス ADRS → [Specify address in octal]) → モニタ MNTR (Address incrementing direction) (Forced set/reset screen (Specify 00 to 77) display) → STEP (+) (Address incrementing direction) → STEP (−) (Address incrementing direction) - Set to a forced set area Read forced set area (00 to 37) → Enter relay number → SET 8 (Forced set) - Set to a forced reset area Read forced reset area (40 to 77) → Enter relay number → RESET 9 (Forced reset) - Release forced set/reset relay (Release in units of one point) Read forced set/reset area → 解除 ESC (Release all the points) Read forced set/reset area → シフト SHIFT → A 0 → 解除 ESC	152	7-3
Read/write internal memory with hexadecimal	Read internal memory with hexadecimal (P, M, C, ,)	クリア CLR → シフト SHIFT → A 0 → アドレス ADRS → Enter file number or address (in hexadecimal) → モニタ MNTR → STEP (+) (Address incrementing direction) → STEP (−) (Address decrementing direction)	155	
	Write internal memory with hexadecimal (P, , , ,)	クリア CLR → シフト SHIFT → A 0 → アドレス ADRS → Enter file number or address (in hexadecimal) → モニタ MNTR → Enter data → ∗ → ∗ → 書込 ENT	159	
Change data memory	Set/reset latch relay (P, , C, ,)	Monitor relay (Refer to page 8-9) → SET 8 (Set) → RESET 9 (Reset)	162	
	Set and reset TMR and CNT (, , C, ,)	Monitor TMR or CNT (Refer to page 8-9) → SET 8 (Set) → RESET 9 (Reset)	164	
	Change register current value (P, , C, ,)	Monitor register (Refer to page 8-9) → Current value → 書込 ENT	166	

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)

Function		Operation procedure	JW-14PG (See page)	PLC model (See page)
Modify register current value	Enter register current value (P, , , ,)	⏛area (⏛0000 to ⏛1577) → Press the DATA/CONST key 3 times. → Enter address → モニタ/MNTR b area (b0000 to b1777) → Press the DATA/CONST key 4 times. → Enter address Register (09000 to 99777) → Press the DATA/CONST key 5 times. → Enter Register area (09 to 99) → , → Enter address → Register (E0000 to E1777) → Press the DATA/CONST key 6 times. → Enter address →	170	
	Delete register current value (P, , , ,)	Registers from file 1 to file E (000000 to 177777 each) → Press the DATA/CONST key 7 times. → Enter file number (1 to 7, C, D, E) → , → Enter address → → Enter data length (1 byte, 1 word or 2 words) → Enter data (Enter with hexadecimal, octal, decimal, bit pattern, or ASC) → 挿入/INS (Insert) / 解除/ESC (Delete)	174	7-4
Edit register current value	Write copy register (P, , , ,)	クリア/CLR → 編集/EDIT (Display the edit menu screen.) → ᵃ2 (Select data memory process.) → ᴬ0 (Select copy.) → Enter top address of copy source → → , → Enter last address of copy source → , → Enter top address of copy source →	176	
	Insert copy register (P, , , ,)	→ , → 書込/ENT (Write copy) — Continuous edit → , → → 挿入/INS (Insert copy)		
	Block write register (P, , , ,)	クリア/CLR → 編集/EDIT (Display the edit menu screen) → ᶜ2 (Select data memory process.) → ᴮ1 (Select block process) → ᴬ0 (Select block write) → → Enter top address to write/insert → , → → Enter last address to write/insert → , →	181	
	Block insert register (P, , , ,)	→ Enter data to write/insert → , → 書込/ENT (Block write) — Continuous write → , → → 挿入/INS (Block insert) — Continuous insert		

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
Edit register current value — Block register delete (P, , , ,)	クリア CLR → 編集 EDIT (Display the edit menu screen) → D 3 (Select data memory process) → B 1 (Select block process) → B 1 (Select block delete) → Enter top address of register for block delete → , → Enter last address of register for block delete → , → Continuous delete 削除 DEL → ,	185	
I/O module monitor process (JW100H, etc.) — Monitor I/O (P, M, C, ,)	✻ → ✻ → DATA CONST → SET 8 → A 0 (Select I/O monitor) → Enter rack number (in octal) → , → Enter slot number (in hexadecimal) → , → Continuous monitor ,	188	7-4
Search I/O (, M, C, ,)	- Search I/O by specifying byte address: ✻ → ✻ → DATA CONST → SET 8 → B 1 (Select I/O search) → A 0 (Select byte address designation) → Enter byte address (in octal) → , → SET 8 (Goes ON) / RESET 9 (Goes OFF) → Continuous check , - Search I/O by specifying a rack number and slot number: ✻ → ✻ → DATA CONST → SET 8 → B 1 (Select I/O search) → B 1 (Select rack and slot designation) → Enter rack number (in octal) → , → Enter slot number (in hexadecimal) → , → SET 8 (Goes ON) / RESET 9 (Goes OFF) → Continuous check ,	191	
Release and execution of I/O verification (P, M, C, ,)	✻ → ✻ → DATA CONST → SET 8 → C 2 → Enter rack number (in octal) → , → Enter slot number (in hexadecimal) → , → A 0 (With verification) / B 1 (Without verification)	195	

Function	Operation procedure	JW-14PG (See page)	PLC model (See page)
I/O module monitor process [JW20H, JW30H, etc.] (, M, C, ,)	- Monitor by specifying the rack number and slot number $*$ → $*$ → DATA/CONST → SET/8 → ᴮ1 (Select rack and slot) Enter slot number (in hexadecimal) ← , ← Enter rack number , → Module monitor → Continuous monitor , - Monitor by specifying the switch setting $*$ → $*$ → DATA/CONST → SET/8 → ᴬ0 (Select switch specification) Specify I/O ᴬ0 Option ᴮ1 I/O link ᶜ2 → Enter set value → , Module monitor → ,	198	7-4
Connect/remove live line of I/O module (, M, C, ,)	- Install/remove I/O module $*$ → $*$ → 6 → SET/8 - Restart operation $*$ → $*$ → 6 → RESET/9	203	

8-14

PC card	Save files	[クリア CLR] → [編集 EDIT] → [C 2] (PC card) → [B 1] (Save files) → [A 0] to [RESET 9] (Enter a file name using 0 to 9 and A to F: Maximum of 8 characters) [書込 ENT] → [A 0] (Execution) → Save files from JW300 to the PC card. → [B 1] (Stop) → Stop	—	7-6
	Load files	[クリア CLR] → [編集 EDIT] → [C 2] (PC card) → [A 0] → List the files that are stored on the PC card. → [STEP (+)] , [STEP (−)] (Select a file) [書込 ENT] → [B 1] to [F 5] (Select the read type) → [書込 ENT] → [A 0] (Execution) → Load files into JW300 from the PC card. → [B 1] (Stop) → Stop		

Chapter 9. Operating the JW300

This chapter describes the functions and instructions that are specific to the JW300 and it covers additions to and changes from the conventional operating methods for the JW300.

9-1 Functions specific to the JW300

The JW300 can handle "block programs" and "PC cards," unlike other models.

[1] Block programs

The JW300 can store multiple programs in "blocks" in a single control module. Each block can be sized in units of 0.5 K-word using the JW-300SP application (ladder logic programming software).
=> The JW-15PG writes an END instruction (F-40) at the end of each block.
The number of blocks available varies with the control module model (JW-3**CU).

	JW-311CU JW-312CU	JW-321CU JW-322CU	JW-331CU JW-332CU	JW-341CU JW-342CU	JW-352CU	JW-362CU
Number of blocks (Max.)	16	32	64	128	256	512

When the JW-15PG is used, only the blocks currently displayed on the JW-15PG can be used.
To display other blocks, use the "block move" function. => See page 9-3.

[Ex.] When 10 is displayed as the program block number on the JW-15PG and the memory capacity is 8 K-words.

Programs in the
JW300 (control module)

Block 0

Block 10   8 K-words

Display range of
the JW-15PG

Block 10

Program
address
$000000_{(8)}$

$017777_{(8)}$
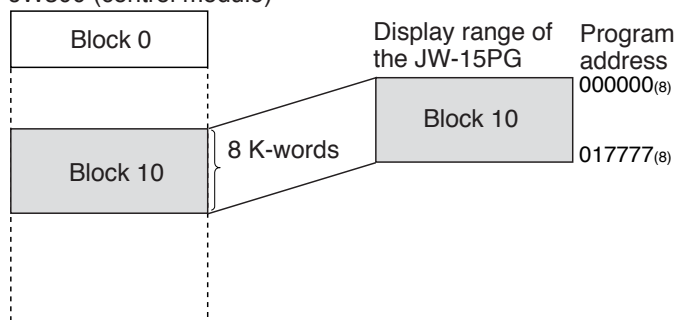

The JW-15PG displays program block numbers, as shown below.

- To display the main block (Block 0)

F E D C B A 9 8 7 6 5 4 3 2 1 0

P-000000   ▶ B: 001
>

Block number (3 digits)
- When you want to display any normal program (Block 1 or higher)

P-000000   ▶ B: 001   ■
>

Indicates the start and end of the block.
(■: Start, □: End)
Notes

- After starting the JW-15PG, the first program block displayed is always the main block (Block 0).
- While monitoring, the JW-15PG may not display a block number, such as when changing the display format.
- A block number is not displayed when displaying data memory, system memory, or other menus.

■ Block operation menu
Key operations concerning program blocks, including block move and others.

```
┌─────┐   ┌───┐   ┌───┐   ┌─────┐
│クリア │→│ ＊ │→│ ＊ │→│アドレス│
│ CLR │   │   │   │   │ ADRS │
└─────┘   └───┘   └───┘   └─────┘
```

● When the main block (Block 0) is displayed

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
┌──────────────────────────┐
│ P   PRPGRAM BLOCK        │
│     0) JUMP -------------│---- Block move => Refer to page 9-3
│     1) I/O REFRESH -------│-- Display the I/O refresh setting => Refer to page 9-6
│                          │
└──────────────────────────┘
```

● When a normal block (Block 1 or higher) is displayed

```
┌──────────────────────────┐
│ P   PRPGRAM BLOCK        │
│     0) JUMP -------------│---- Block move => Refer to page 9-3
│     1) RUN/HALT ---------│-- Start/end block => Refer to page 9-4

└──────────────────────────┘
```

(1) Block move

To change the program block currently displayed and view some other block, follow the procedure below.

■ Operations

$$
\boxed{\begin{smallmatrix}クリア\\CLR\end{smallmatrix}} \rightarrow \boxed{*} \rightarrow \boxed{*} \rightarrow \boxed{\begin{smallmatrix}アドレス\\ADRS\end{smallmatrix}} \rightarrow \boxed{\begin{smallmatrix}A\\0\end{smallmatrix}}
$$

(Refer to page 9-2) (Move)

$\boxed{\begin{smallmatrix}STEP\\(+)\end{smallmatrix}}$ (Direction to increase the block number) $\longrightarrow \boxed{\begin{smallmatrix}SET\\8\end{smallmatrix}}$

$\boxed{\begin{smallmatrix}STEP\\(-)\end{smallmatrix}}$ (Direction to decrease the block number)

```
F E D C B A 9 8 7 6 5 4 3 2 1 0
┌─────────────────────────────────┐
│ P   BLOCK  JUMP                 │
│       JUMP = 001:003            │
│       (+) (−)  SELECT           │
│       (SET)    OK               │
└─────────────────────────────────┘
```

The block number (when 3)

The block number currently displayed (when 1)

- To select a block number, press $\boxed{\begin{smallmatrix}STEP\\(+)\end{smallmatrix}}$ and $\boxed{\begin{smallmatrix}STEP\\(-)\end{smallmatrix}}$.

```
         ┌──────────────┐
         │  000 : 003   │
         │      ↓ ↑      │
 STEP    │  001 : 003   │   STEP
 (+)     │      ↓ ↑      │   (−)
         │  002 : 003   │
         └──────────────┘
```
- When there are no program blocks, the block number will be "1."

[Ex.] Select block number "002" and press $\boxed{\begin{smallmatrix}SET\\8\end{smallmatrix}}$.

```
┌─────────────────────────────────┐
│                                 │
│                                 │
│ P - 000000        ▶ B: 002 ■    │
│ >                               │
└─────────────────────────────────┘
```
Move to Block 002 (normal block).

(2) Start/end block (when a normal block is selected)

To set the start/end for each block, perform the key operations below.

■ Operations

(Refer to page 9-2)

(Execute/stop executing)

(OK)

Stop while running

Start while stopped

(Cancel)

Return to the menu display.

```

Changes to "stopped."
(3) Set/change the start relay (when a normal relay is selected)

To set/change a relay to start a block operation, do the following.

■ Operations

| クリア CLR | → | * | → | * | → | アドレス ADRS | → | C 2 |
(Refer to page 9-2)   (Start relay)

● When the start relay is already set

1)
[C 2] → Enter an address to change the start relay → [SET 8] → Change start relay
(Change)

2)
[B 1] → [SET 8] → Release the start relay
(Release)

[A 0] → Return to the menu display
(Cancel)

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
P  BLOCK TRIGGER
   BLK TRIG. VALID
   0) CANCEL
   1) CLR    2) CHANGE
```

● When the start relay has not been set

1)
[B 1] → Specify a start relay address → [SET 8] → Set the start relay
(Set)

[A 0] → Return to the menu display
(Cancel)

```
P  BLOCK TRIGGER
   NO BLOCK TRIG.
   0) CANCEL
   1) SET
```

1) When a start relay is already set press [C 2] (change). When the start relay has not been set, press the [B 1] (set) key.

```
P  BLOCK TRIGGER
   BLK TRG = 000000

   > (ENT.) PUSH
```

Enter a relay number and press [SET 8]. Then it will be the start relay. At the same time, the start relay flag will be turned ON (set).

2) If a start relay has already been set, press the [B 1] (release),

```
P  BLOCK TRIGGER
   > OK
```

(4) Refresh the I/O status display (when the main block is selected)

The status of the I/O refresh can be checked as follows.

■ Operation procedure

```
┌─────┐     ┌─────┐     ┌─────┐     ┌─────┐     ┌─────┐

```
(1) Save files

To save files to a PC card from a JW300, do the following:

■ Operations

1)

$\boxed{\text{クリア CLR}}$ → $\boxed{\text{編集 EDIT}}$ → $\boxed{^C 2}$ → $\boxed{^B 1}$ → $\boxed{^A 0}$ to $\boxed{\text{RESET } 9}$

(PC card) (Save a file) (Enter a file name using 0 to 9 and A to F: Maximum 8 characters)

Refer to page 9-7

→ $\boxed{\text{書込 ENT}}$ → $\boxed{^A 0}$ → Save a file from the JW300 to the PC card

(Saving)

→ $\boxed{^B 1}$ → Stop

(Stopped)

2)
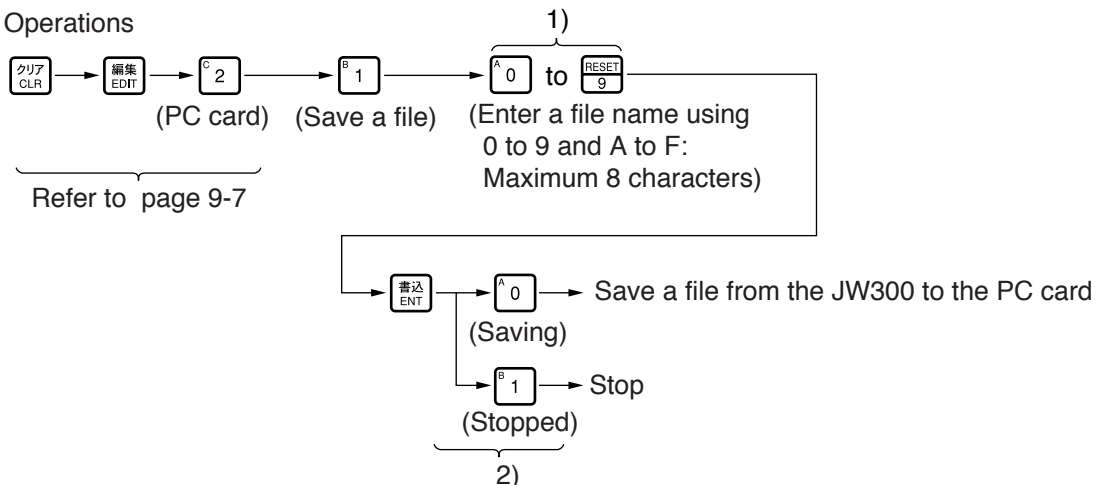

1) Enter a file name to use when saving the file.

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
P  FILE SAVE
   FILE NAME (MAX8)

   (ENT) OK
```

- Enter a file name using 0 to 9 and A to F, maximum of 8 characters.
- Press $\boxed{\text{削除 DEL}}$ to clear any character you entered.

2) Confirm the file save operation

```
P  FILE SAVE
   SAVE?

   0) RUN  1) STOP
```

- When saving a file, the JW-15PG will save the files that are stored in system memory #2221 on the JW300.
  The initial value in #2221 is $1F_{(H)}$ (save all files).

(2) Load files

To load files from the PC card into the JW300, do the following.

■ Operations

1)

[クリア CLR] → [編集 EDIT] → [C 2] → [A 0] → Display the entire list of files → [STEP (+)] , [STEP (−)]
                (PC card) (Load files)   stored on the PC card   (Select a file name)

Refer to page 9-7

→ [書込 ENT] → [B 1] to [F 5] → [書込 ENT] → [A 0] → Load the file from the PC card into the JW300
           (Select a file to read)   (Loading)

                              → [B 1] → Stop
                2)   (Stopped)

                                3)

1) Display of the list of files (select a file name)

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
P  FILE LOAD
> ABC111      PBK
↑ ABC112      PDT
  BCDEF222    PFL
```
            ← Display example

File names are displayed as 11 characters (8 + 3 fixed).

Cursor position (move up and down with [STEP (+)] and [STEP (−)])

- When there are more files than can be displayed on one screen, the next page (3 lines) will be displayed.

2) Select a file

Select a file name using the cursor (press [書込 ENT]), the "Read a file" selection screen will appear.

```
P  FILE LOAD
   SELECT FILE
1 □PRG    2 □SYS
3 □PARA  4 □Fi      5 □DT
```

Select the files you want to read using [B 1] to [F 5] . (Select two or more at once)
[Ex.] When you want to read in both a program and parameters, press [B 1] and [3] .

```
P  FILE LOAD
   SELECT FILE
1 ■PRG    2 □SYS
3 ■PARA  4 □Fi      5 □DT
```

- Press the same key a second time to undo the selection.
- To quit the selection, press [書込 ENT] .

3) Check the file loading

```
P  FILE LOAD
   LOAD?

0) RUN   1) STOP
```

After confirming the file loading by pressing [A 0] , the selected file will be loaded from the PC card into the JW300 acording the "file name" and "type" selected.

9-9

9-2 Instructions specific to the JW300

The JW300 has "new instructions (STR POS, etc.)" and an "assign a register for TMR/CNT" instruction, which are unique to it.

[1] Basic instruction

(1) New instructions

The JW300 has the following unique instructions related to integers, output instructions, and bit operation.

Basic instruction	Ladder symbol	Key operation
STR POS	⊢⊢P⊢⊢	[STR] → [STR] → [STR] → | Relay number | → [書込 ENT]
STR NEG	⊢⊢N⊢⊢	[STR] → [STR] → [STR] → [STR] → | Relay number | → [書込 ENT]
AND POS	⊢P⊢	[AND] → [AND] → [AND] → | Relay number | → [書込 ENT]
AND NEG	⊢N⊢	[AND] → [AND] → [AND] → [AND] → | Relay number | → [書込 ENT]
OR POS	⊢P⊢¬	[OR] → [OR] → [OR] → | Relay number | → [書込 ENT]
OR NEG	⊢N⊢¬	[OR] → [OR] → [OR] → [OR] → | Relay number | → [書込 ENT]
OUT POS	(P)	[OUT] → [OUT] → [OUT] → | Relay number | → [書込 ENT]
OUT NEG	(N)	[OUT] → [OUT] → [OUT] → [OUT] → | Relay number | → [書込 ENT]
OUT NOT	(／)	[OUT] → [OUT] → | Relay number | → [書込 ENT]
SET	(S)	[OUT] → [シフト SHIFT] → [SET 8] → | Relay number | → [書込 ENT]
RST	(R)	[OUT] → [シフト SHIFT] → [RESET 9] → | Relay number | → [書込 ENT]
PUSH		[シフト SHIFT] → [STR] → [書込 ENT]
POP		[シフト SHIFT] → [OUT] → [書込 ENT]
MRD		[シフト SHIFT] → [AND] → [書込 ENT]

[Ex.] Display example when you want to enter a "STR POS" instruction.

```
F E D C B A 9 8 7 6 5 4 3 2 1 0

P - 000000        ▶B: 000 ■
> STR POS         000000
```

(2) TMR/CNT instruction

When the JW300 is used, the allowed range will be "000 to 7999", depending on the setting of the TMR/CNT, and the register can be assigned.

Instruction	Allowed range	
	JW300	Other than JW300
TMR、CNT	Assign 0000 to 7999 registers	0000 to 1999
DTMR（BCD）, UTMR（BCD） DCNT（BCD）, UCNT（BCD）	Assign 0000 to 7999 registers	0000 to 7999
DTMR（BIN）, UTMR（BIN） DCNT（BIN）, UCNT（BIN）	Assign 0000 to 32767 registers	0000 to 32767

All of the byte addresses in data memory can be specified when assigning registers.
To make an assignment, use two bytes for the byte address and be sure to specify only even addresses.

■ Key operations for assigning registers

```
      F E D C B A 9 8 7 6 5 4 3 2 1 0
   ┌─────────────────────────────────┐
   │ STR                  000400      │ ┐
   │ TMR                  17777       │ ├ Display example
   │ P - 000203         ▶ B: 000      │ │
   │ >           ┌ BCD        0000 ┐  │ ┘
   └─────────────┴─────────────────┴──┘
```
Press [DATA CONST], to change the registers display.

```
BCD 0000 ──→ ⊐00000 ──→ b00000 ──→ 009000 ┐
   ↑                                        │
   └── f00000000 ←── Z000 ←── E0000 ←───────┘
       (File register)
```

[Ex.] Display example when set to "⊐00000"
```
   ┌─────────────────────────────────┐
   │ STR                  000400      │
   │ TMR                  17777       │
   │ P - 000203         ▶ B: 000      │
   │ >                    ⊐00000      │
   └─────────────────────────────────┘
```
Notes

- When the register specification is selected for the TMR/CNT set value, the set value cannot be changed using the "change mode."

[Display example]
```
   ┌─────────────────────────────────┐
   │ STR                  000400      │ ── Current value
   │ TMR      17777    1000           │
   │ C - 000203         ▶ B: 000      │
   │ >  ⊐00000         H 1999         │ ── Set value (Can't be changed)
   └─────────────────────────────────┘
```
When the JW300 is used, DTMR, UTMR, DCNT, and UCNT will be in a two-word configuration.
(When the machine is not a JW300, these are in a 3-word configuration.)

[Ex.] Display example when the JW300 is used

```
┌─────────────────────────┐
│ STR          000400      │
│ DTMR (BCD)    17777   ↖  │
│ P - 000312   ▶ B: 000    │      2-word display
│ >      BCD     H 1999 ↖  │
└─────────────────────────┘
```
[Ex.] Display example when some other model is used

```
┌─────────────────────────┐
│ DTMR        (BCD) ↖      │
│               777 ←      │      3-word display
│ P - 000312               │
│ >      BCD     1999  ↖   │
└─────────────────────────┘
```
[2] Index qualification

You can add index register (Z000 to Z377) details to relays, registers, TMR/CNT contact points, TMR/CNT numbers, TMR/CNT/MD current values, and labels in JW300 programs, as well as perform addition and subtraction.

■ Operations

Enter relay numbers etc. using the program → [,] → Enter an index register address (Z000 to Z377)

● When a normal qualification is selected

[書込 ENT]

● When an auto qualification is selected

[STEP (+)] (Addition) → Enter an auto addition/subtraction value (0 to 255) → [書込 ENT]

[STEP (−)] (Subtraction)
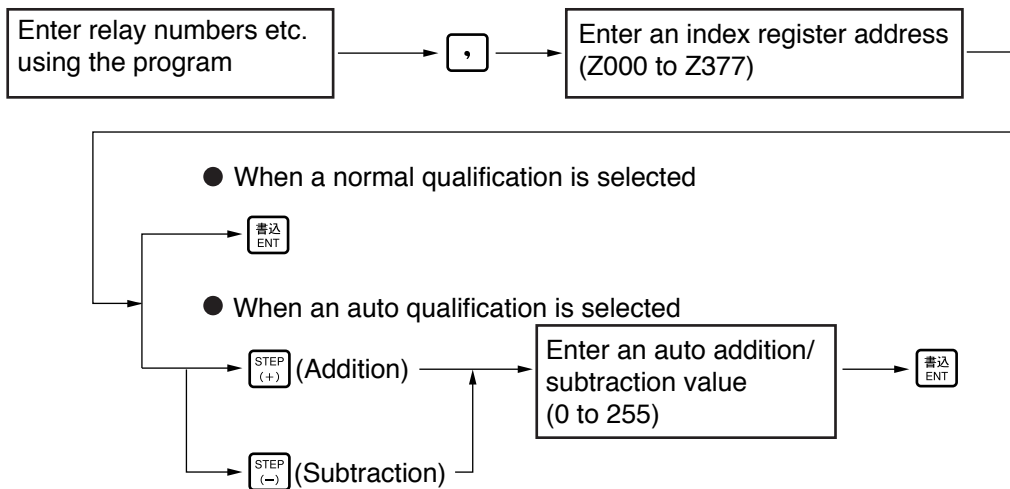

[Ex.] An input example STR POS 543777, Z012+5

[STR] → [STR] → [STR] → [F 5] → [E 4] → [D 3] → [7] → [7] → [7]

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
BLOCK
P - 000001        ▶ B: 000
> STR  POS    543777
```

↓ [,] ↓

```
BLOCK
P - 000001        ▶ B: 000
◀, Z000        543777
```

↓

[B 1] → [C 2] → [STEP (+)] → [F 5]

↓

```
BLOCK
P - 000001        ▶ B: 000
◀, Z0012+005
```

↓ [書込 ENT]

```
BLOCK
P - 000001
▶STR  POS      543777
```

Each time [,] is pressed, the display changes as follows "◀, Z012+005" etc.
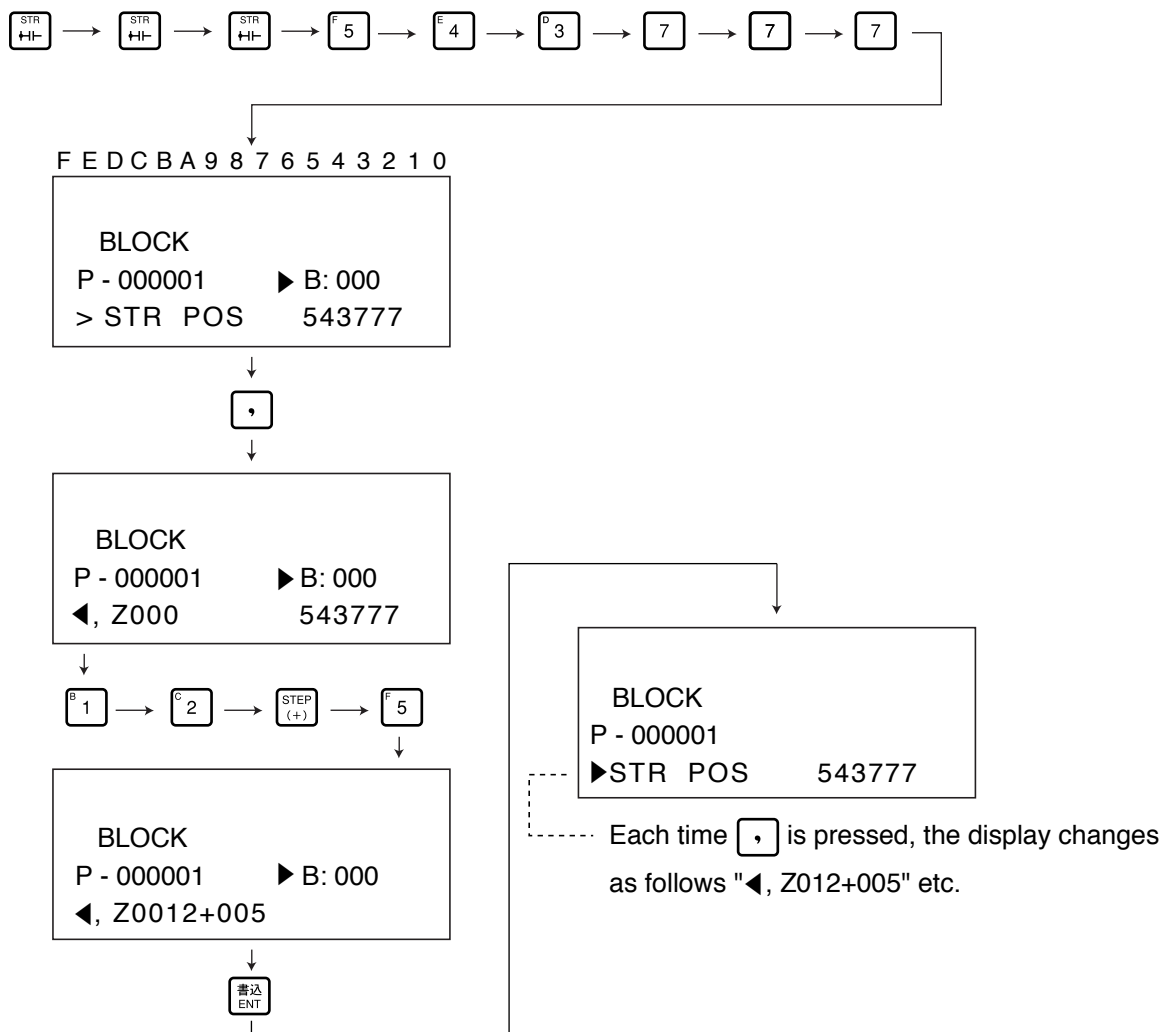

9-3. Additions and changes from conventional operations

This section describes the additions and changes in operations (such as displaying data memory) which are different from the conventional models.

[1] Displaying data memory

Using the JW300, you can display the data memory area that is accessed when entering instructions, searching data memory, and monitoring registers in the following order.

Relay number	TMR/CNT/MD number	Relay area	Current value of TMR/CNT/MD
000000 to 015777 020000 to 075777 100000 to 543777	00000 to 17777	⅃00000 to ⅃01577 ⅃02000 to ⅃07577 ⅃10000 to ⅃54377	b00000 to b01777 b02000 to b03777 b04000 to b37777

Label number	File register	Register	Register	Register
[LB0000 to LB1777]	[f 00000000 to f 37777777]	[Z000 to Z377]	[E0000 to E7777]	[009000 to 389777]
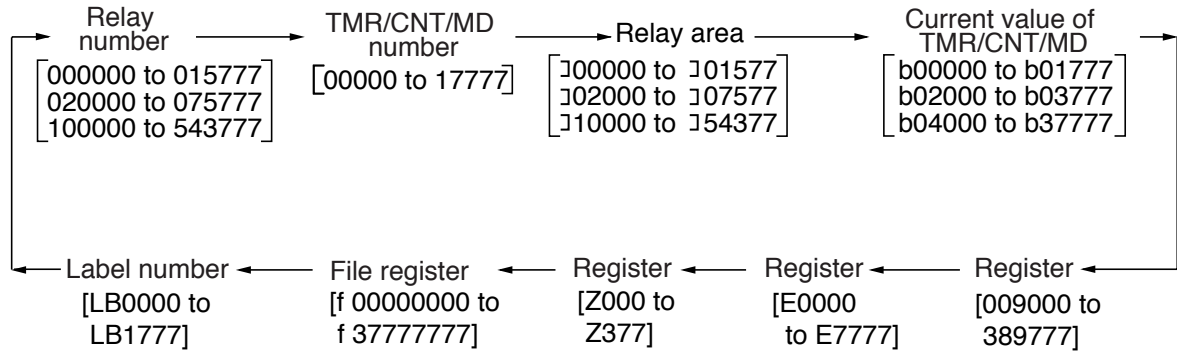

- To change the display, press the [DATA/CONST] or [解除/ESC] key (reverse).
- The range for each address varies with the control module model used with the JW300 (JW-3**CU).

■ Display of Z000 to Z377
The Index register addresses (Z000 to Z377) are configured as words.
Therefore, the data can only be displayed in word length. They cannot be changed to a display of bytes or double words.

```
        F E D C B A 9 8 7 6 5 4 3 2 1 0

[Ex.]  P DATA

       > Z000         H 0000         ←——— Hexadecimal display
```
- As with the other registers, the data in the display are changed in the following order, by pressing [変換/CONV] key.

H (hexadecimal) → O (octal) → D (decimal) → B (binary) → ASCII ⅂
■ Displaying file registers f00000000 and up
The file registers (f00000000 to f37777777) only exist in file 1.

```
[Ex.]  P DATA       f 00000000

       >            HEX    00      ←——— Hexadecimal byte display
```
■ DisplayingLB0000 to LB1777
Label numbers (LB0000 to LB1777) are not always in the same block, so their block numbers are displayed.

```
[Ex.]  P DATA          LB0000

       >          000 - 000100
```
      Block number Program address
- LB0000 is programmed at program address 000100(8) in Block 0 (the main block).

[2] Clear program memory

When using the JW300 and you want to clear the program memory you can use the "clear all blocks" or "clear an individual block" functions.

■ Operations

```
[✳] → [✳] → [PROG MODE] → [SET 8] → [クリア CLR] → [RESET 9]
```

● Clear all blocks

[書込 ENT] ----- Clear program memory and data memory

```
F E D C B A 9 8 7 6 5 4 3 2 1 0
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    PROGRAM, DATA                │
│ >  (ENT.) PUSH                  │
│                                 │
└─────────────────────────────────┘
```

[シフト SHIFT] → [^ 0] → [書込 ENT] ----- Initialize all

```
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    (ALL INTLZ.)                 │
│ >  (ENT.) PUSH                  │
│                                 │
└─────────────────────────────────┘
```

● Clear an individual block

[アドレス ADRS] → [STEP (+)] [STEP (−)] → [書込 ENT]
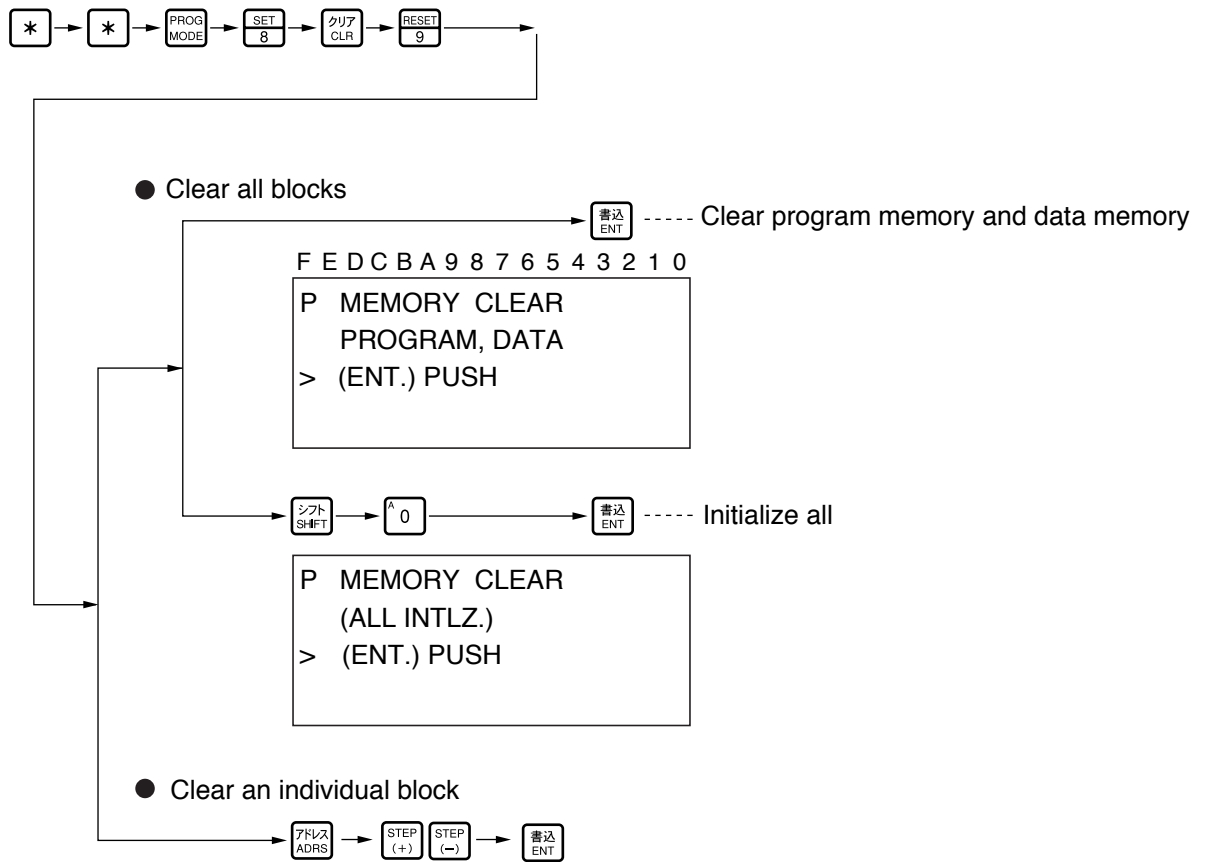

[Ex.] When Block 0 (main), Block 1, and Block 2 (normal) are programmed.

```
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    PROGRAM = ALL                │
│    (+) (−) SELECT               │
│ >  (ENT.) PUSH                  │
└─────────────────────────────────┘
```

```
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    PROGRAM = 000                │
│    (+) (−) SELECT               │
│ >  (ENT.) PUSH                  │
└─────────────────────────────────┘
```

[STEP (+)]   [STEP (−)]

```
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    PROGRAM = 001                │
│    (+) (−) SELECT               │
│ >  (ENT.) PUSH                  │
└─────────────────────────────────┘
```

```
┌─────────────────────────────────┐
│ P  MEMORY  CLEAR                │
│    PROGRAM = 002                │
│    (+) (−) SELECT               │
│ >  (ENT.) PUSH                  │
└─────────────────────────────────┘
```
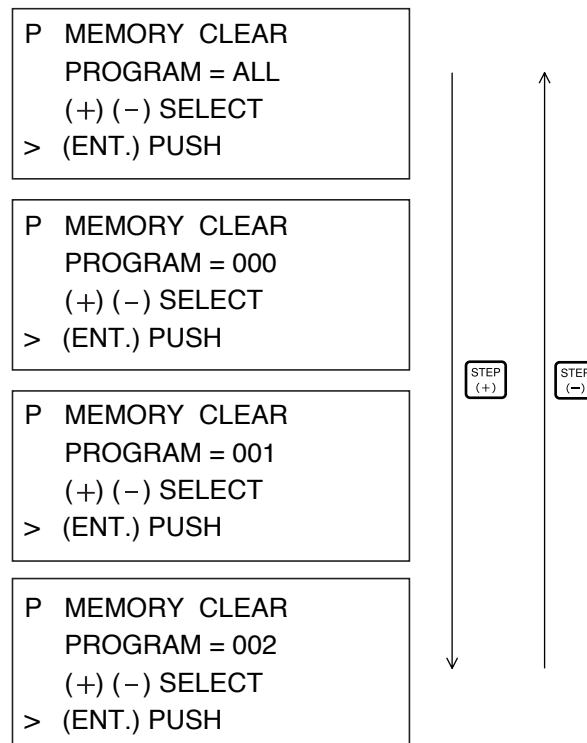

If there is no program in the normal blocks, only "ALL" and "000" will be displayed.

[3] Clear the file register

When the JW300 is used, only file 1 is available as a file register. You can only use the "Clear the file register (file number 1)" function. You cannot use the "Clear a specified file register" function.

■ Operations

$\boxed{*} \rightarrow \boxed{*} \rightarrow \boxed{\substack{\text{PROG} \\ \text{MODE}}} \rightarrow \boxed{\substack{\text{SET} \\ 8}} \rightarrow \boxed{\substack{クリア \\ \text{CLR}}} \rightarrow \boxed{\substack{\text{RESET} \\ 9}} \rightarrow$

O: Can be done $\rightarrow \boxed{\substack{^\wedge \\ 0}} \longrightarrow \boxed{\substack{書込 \\ \text{ENT}}}$ ------ Clear the file register (file number 1)

X: Cannot be done $\rightarrow \boxed{\substack{シフト \\ \text{SHIFT}}} \rightarrow \boxed{\substack{F \\ 5}} \rightarrow \boxed{\substack{\text{Enter a file} \\ \text{register} \\ \text{number}}} \rightarrow \boxed{\substack{書込 \\ \text{ENT}}}$ ------ Clear the specified file register.
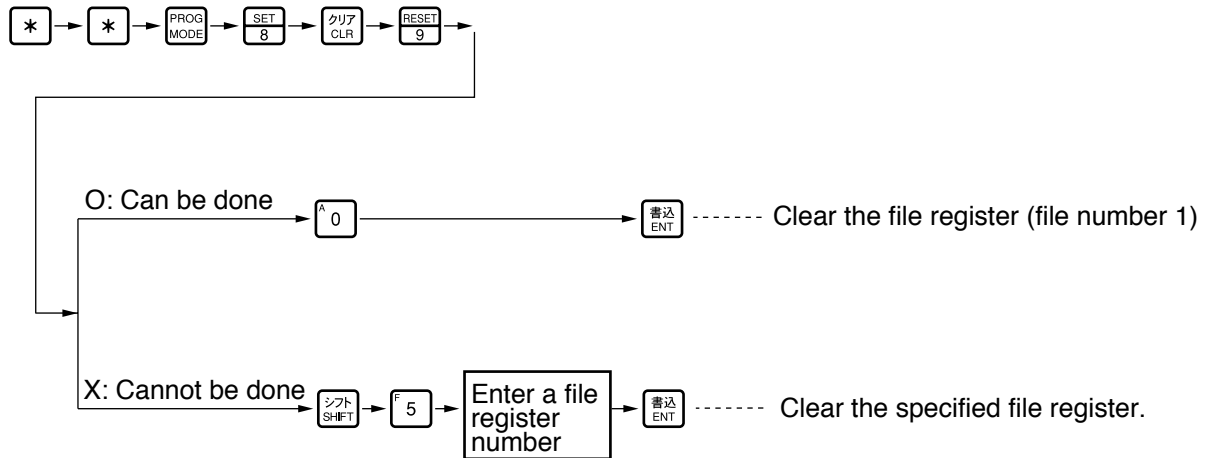

[4] Monitor program

When the JW300 is used, the index registers and file registers that are programmed will be displayed as follows.

(1) Monitor index register Z***

The index registers are fixed to word length operation (except as noted) and they will be displayed as words when monitoring a program.

[Display example]

F E D C B A 9 8 7 6 5 4 3 2 1 0

```
STR              000000□
F - 000              XFER
C - 000003      ▶ B: 000
> Z000      H    0000   ←——— Fixed to word length
```

- The code can be converted using the $\boxed{\substack{変換 \\ \text{CONV}}}$ key.

H (hexadecimal) → O (octal) → D (decimal) → Bit pattern → ASCII

(2) Monitor file register f********

When monitoring programs, they will always be displayed as bytes in hexadecimal.

[Display example]

```
STR              000000□
F - 000              XFER
C - 000003      ▶ B: 000
> f00000000      H  00   ←——— Fixed to hexadecimal bytes
```

[5] Parameter setting

When the JW300 is used, parameters (special I/O, options) can be set using the "edit" menu.
- You can monitor parameter data during operation of the program.
  However, you cannot change the parameter data while the program is running.
- In the JW30H, you can set the parameters on the "initial" menu.

■ Setting mode

Program	Monitor	Change	Terminal	Initial		2PG mode
○	△	△	×	×		×
	(Unable to change data)					

■ Operations (menu display)

```

    └──────────────────────────────┘
```

[8] Deleted functions

When the JW300 is used, the following functions cannot be used. (However, they can be performed with the JW30H)
- Set and monitor the timer time
- Read and write internal memory in hexadecimal
- Free I/O registration
- Octal/decimal/hexadecimal display of values
- Device functions
- 2PG2 mode for a remote link

Chapter 10. Table of Messages

This chapter explains the messages that are displayed by the JW-15PG while checking programs or when an error occurs.

[1] Messages seen while checking programs

Message	Error address displayed	Meaning	Possible countermeasures
Check results are OK	00000	No syntax errors were found while programming	—————
STACK OVER *1	Stack over address	Excessive use of STR (NOT) instruction.	Delete the STR (NOT) instruction or insert an AND (OR) STR instruction.
STACK UNDER *1	Stack under address	Shortage of STR (NOT) instruction or excessive use of AND (OR) STR instruction.	Insert a STR (NOT) instruction or delete an AND (OR) STR instruction.
STACK EXIST *2	END (F-40) instruction address	Data remains in the stack even though the F-40 (END) instruction is reached.	Add or delete an instruction.
MCR ERROR	MCR error detected address	F-31 (MCR) is used where an F-30 (MCS) condition does not exist.	Delete F-31 (MCR) instruction or insert F-30 (MCS) instruction.
MCS EXIST *3	END (F-40) instruction address	F-30 (MCS) is not reset even though the F-40 (END) instruction is reached.	Insert F-31 (MCR).
JCS ERROR	F-41 (JCS) used twice	F-41 (JCS) is used within the range of an F-41 (JCS). F-41 (JCS) cannot be nested.	Delete F-41 (JCS).
JCR ERROR	JCR error detected address	F-42 (JCR) is used where an F-41(JCS) condition does not exist.	Delete F-42 (JCR) or insert F-41 (JCS).
JCS EXIST *3	END (F-40) instruction address	F-41 (JCS) is not reset even though the F-40 (END) instruction is reached.	Insert F-42 (JCR).
DOUBLE OUT	Same output instruction number detected	Duplicate use of the same relay number for an output instruction (OUT).	Change the output instruction relay number.
DOUBLE NUMBER	Data memory used twice	Duplicate use of a TMR, CNT or MD number.	Change TMR/CNT/MD number.
NO END ERROR	Last address	F-40 (END) does not exist in the program.	Write an END (F-40) instruction.
LEVEL ERROR *4	Level error occured address	F-47 (ONLS) is used within the range of an F-47 (ONLS).	Delete F-47 (ONLS) instruction.
		F-48 (ONLR) is used where an F-47 (ONLS) condition does not exist.	Delete F-48 (ONLR) or insert F-47 (ONLS).
NO LABEL	No label F-141 (JMP), F-142 (CALL) instruction address	No jump destination label for F-141 (JMP) or subroutine label for F-142 (CALL).	Insert F-140 (LABL).
DOUBLE LABEL	Same label reused address	Same label number is use for F-140 (LABL).	Correct label number.
FOR/NEXT ERROR	"FOR-NEXT" error occurred address	F-144 (FOR) is use within the range of an F-144 (FOR).	Delete F-144 (FOR).
		F-145 (NEXT) is used where an F-144 (FOR) condition does not exist.	Delete F-145 (NEXT) or insert F-144 (FOR).
CHNNL NOT OPEN (For JW50H/70H/100H)	F-204 (SEND), F-205 (RCV) instruction address	Used F-204 (SEND) or F-205 (RCV) where there was no F-202/F-203 (OPCH) instruction.	Insert F-202/F-203 (OPCH) instruction.

*1: For details about correcting the stacks, see the "Application instruction and stack" section in the manual for each PLC.

*2: When a W10 or W16/51 is used, the JW-15PG checks "STACK EXIST."

*3: When a JW300, JW30H, J-board (Z500) or W10/16/51 is used, the JW-15PG checks "MCS EXIST" and "JCS EXIST."

*4: When a W10 or W16/51 is used, the JW-15PG does not check for a "LEVEL ERROR." (Unable to use F-47 and F-48)

Message	Error address displayed	Meaning	Possible countermeasures
DOUBLE SFS	F-380 (SFS) used twice address	An F-380 (SFS) was used within an F-380 (SFS) range. An F-380 (SFS) cannot be nested.	Delete one F-380 (SFS).
SFE ERROR	SFE error detected address	An F-381 (SFE) was used where there was no F-380 (SFS) condition.	Delete F-381 (SFE) or insert F-380 (SFS).
STEP ERROR	STEP error detected address	There is no step, branch, connection, or confluence instruction to execute next.	Insert F-391 (LINE) or F-390 (STEP).
DOUBLE MANU	F-389 (MANU) detected address	An F-389 (MANU) was used more than one time in a single process.	Delete F-389 (MANU).
DOUBLE STEP	Same step number detected address	The F-390 (STEP) used the same step number more than once within the same process.	Change the step number of the F-390 (STEP).
DOUBLE PROC	Same process number detected address	The same process number was used twice for F-382 (PROC). *	Change the F-382 (PROC) process number.
SF INST ERROR	SF INST error detected address	Used an F-30 (MCS), F-31 (MCR), F-41 (JCS) or F-42 (JCR) other than F-389 (MANU) within an SF instruction process.	Delete the F-30 (MCS), F-31 (MCR), F-41 (JCS) or F-42 (JCR).

* An error will also occur when a F-383 (PRCE) is used where there is no F-382 (PROC).
  As a countermeasure, delete a F-383 (PRCE) or insert a F-382 (PROC).

- Some messages may not be displayed on the JW-15PG when using a PLC model that does not have corresponding instructions.

[2] Error messages

Item and contents		Special relay	Error code	Message (16 characters 2 lines)	JW300	JW50H/70H/100H JW50/70/100	JW30H J-board (Z500)	JW20H JW20 J-board (Z300)	JW10	W100 W70H W100H	W10 W16 W51
